

A scatter plot with a white background and a black border. The plot contains numerous small, light blue circular data points. These points are primarily clustered in a dense, vertical column on the right side of the image. There are also several isolated points scattered across the left side and within the main cluster area. The overall shape of the data distribution is elongated and somewhat irregular.

A scatter plot showing the relationship between $\log_{10}(\Delta T)$ (x-axis) and $\log_{10}(\Delta T_{\max})$ (y-axis) for 1000 trials. The data points are red circles. The plot shows a dense cluster of points forming a triangular shape pointing to the right, with a few outliers to the left. The x-axis ranges from 0 to 10, and the y-axis ranges from 0 to 10.
